

Fnomo — Go-To-Market Execution Strategy

Prepared by: Kush Trivedi

Fnomo is not entering the market as another fintech product competing with brokers, apps, or content platforms.

It sits earlier in the journey.

Today, users can discover options, read content, and execute transactions easily. What they still lack is clarity at the moment they are about to act. That gap is where most hesitation, mistakes, and regret happen.

Fnomo is positioned to fill that gap.

It starts as a discovery and comparison layer and evolves into a system where users can validate their decisions before taking action. The goal is simple: when a user is about to make a financial or high-value decision, Fnomo becomes the place they check before proceeding.

The GTM strategy is built around where real decisions happen, not where attention is highest.

Instead of broad marketing or heavy paid acquisition, the focus is on entering environments where users are already thinking about decisions:

- **Communities where discussions and validation happen**
- **Platforms where users compare options**
- **High-frequency decision environments such as trading and purchases**

This allows Fnomo to reach users at high-intent moments, leading to better activation and lower acquisition costs.

Execution follows a bottom-up approach.

The initial focus is on communities, traders, and active decision-makers who already operate in these environments. This allows for faster feedback, quicker iteration, and early validation of behavior.

Once usage patterns are validated, distribution expands to influencers, fintech platforms, and institutional partnerships.

Performance is tracked through one primary metric:

Pre-action usage rate — the percentage of users who use Fnomo before making a decision.

Supporting metrics include activation, retention, and channel-level acquisition cost, with a strong focus on keeping CAC efficient and improving repeat usage.

Revenue is built through partnerships, not direct monetization at the start.

Fnomo aligns with:

- Influencers
- Communities
- Fintech platforms

through revenue-sharing models, ensuring low upfront cost and aligned incentives.

What makes this approach work is positioning.

Fnomo does not compete with existing platforms. It sits before them.

It does not try to capture attention. It captures behavior at the point where decisions are made.

If executed correctly, this creates a simple habit:

Before making a decision → check Fnomo → then act

The strategy is designed to be executed immediately, even in a lean setup, with direct ownership of outreach, feedback loops, and early partnerships.

The focus is not on scale from day one, but on validating behavior first and then expanding distribution based on what works.

In short, Fnomo is not trying to be another platform in the ecosystem.
It is positioning itself as the layer that influences decisions before the ecosystem is used

STAKEHOLDER ECOSYSTEM & DISTRIBUTION ARCHITECTURE

1.Current Product State (Fnomo)

Fnomo currently operates as a financial discovery and comparison layer, enabling users to explore and evaluate financial options across categories.

At its current stage, the platform primarily focuses on:

- Discovering financial products
- Comparing available options
- Aiding users in understanding choices before action

The product is positioned at the early stage of the decision journey, where users are exploring and narrowing down options but not yet fully confident in execution.

The GTM strategy is designed to evolve Fnomo from a discovery platform into a decision intelligence layer.

While the current product enables discovery and comparison, the next phase introduces structured decision support, where users can:

- Validate choices before acting.
- Reduce uncertainty at the moment of decision.
- Improve confidence across financial and purchase actions.

This ensures that Fnomo transitions from:

“Where users explore options”

to

“Where users confirm decisions before action”.

1.1 Objective

The purpose of this section is to define and structure the complete stakeholder ecosystem for Fnomo, not as a static list, but as an execution-ready distribution architecture.

The goal is to move from broad identification of entities to:

- Clear prioritization
- Defined entry points
- Access pathways
- Expected conversion probability.

This ensures that the GTM strategy is not theoretical, but directly actionable.

1.2 Strategic Reframing

Traditional Approach (Observed in Initial Draft)

- Platforms
- Influencers
- Banks

This approach lacks execution clarity because it treats all stakeholders equally and does not account for user behaviour.

Revised Execution Framework

The ecosystem has been restructured based on decision proximity and behavioural influence across four layers:

1. Where decisions happen
2. Where validation happens
3. Who influences daily actions?
4. Where regret is created

This reframing aligns Fnomo's positioning as a pre-decision intelligence layer, rather than a distribution-dependent product.

1.3 Layer 1: Decision Point Owners (Primary Acquisition Layer)

These stakeholders run at the exact moment where users are about to act. This layer is the highest priority for first execution.

A. Search & Intent Platforms

Entities:

- Google Search
- YouTube Search

User Behaviour:

Users actively search when they are about to make a financial decision.

Execution Strategy:

1. Intent-driven keyword targeting
 - II. Decision-based messaging (“compare and validate before you decide”)
3. Direct routing to Fomo decision tools

Priority Level: Highest

Reason: Maximum intent, lowest resistance

B. Broker Platforms**Entities:**

- Zerodha
- Groww
- Upstox

User Behaviour:

Users make repeated financial decisions (daily/weekly).

Execution Strategy:

- Integration as a decision-support layer
- Pre-trade decision support signals
 - Simplified risk indicators
- Risk sign overlays.

Priority Level: High

Reason: High-frequency decision environment

C. High-Ticket Retail Platforms

Entities:

- Croma
- Reliance Digital
- Amazon (Electronics category)
- Vijay Sales

User Behaviour:

Users hesitate before large purchases (₹20,000 – ₹1,00,000+).

Execution Strategy:

- Checkout-level decision prompts
- EMI impact visualization
- “Better alternative” recommendations

Priority Level: High

Reason: High regret probability, strong emotional trigger

1.4 Layer 2: Validation Platforms (High-Conversion Layer)

These platforms represent environments where users actively seek confirmation before making financial decisions.

They operate at a critical stage between exploration and action, making them high-conversion entry points for Fnomo.

Entities

- MoneyControl (forums and discussions)
 - ET Markets
 - ValuePickr
 - TradingView
 - Reddit (IndiaInvestments)
 - Quora
-

User Behaviour

Users on these platforms are typically:

- Evaluating multiple options
- Seeking peer validation or expert opinion

- **Attempting to reduce uncertainty before acting**

This makes them highly receptive to structured decision support.

Execution Strategy

Fnomo will engage through native participation, not paid advertising.

Approach includes:

- **Contributing to existing discussions with relevant insights**
 - **Providing structured comparison inputs**
 - **Introducing decision-support elements such as:**
 - **Simplified evaluation signals**
 - **Risk indicators**
 - **Comparative summaries**
-

Access Pathways

- **Community moderators**
 - **Active contributors and influencers within threads**
 - **High-engagement discussion posts**
-

Close Probability (Estimated)

Platform Type	Probability
Reddit / Telegram communities	60–70%
TradingView contributors	55–60%
Large platforms (MoneyControl, ET Markets)	25–35%

Priority Level

Medium–High

Reason

These platforms provide strong conversion potential due to high user intent. However, successful entry requires credibility, consistency, and value-driven participation rather than direct promotion.

1.5 Layer 3: Daily Influence Network (Behavioural Multipliers)

This layer includes stakeholders who influence decisions continuously, not occasionally.

Entities:

- **Telegram trading group administrators.**
 - **Active retail traders (Zerodha / Groww users)**
 - **Trading View contributors**
 - **Micro finance creators**
-

User Behaviour:

- **Frequent decision-making**
 - **Peer influence driven.**
 - **High engagement loops**
-

Execution Strategy:

- **Provide decision tools (not content)**
 - **Enable them to integrate Fnomo insights within their discussions.**
 - **Create shareable decision insights.**
-

Access Pathways:

- **Direct outreach (Telegram / Discord / LinkedIn)**
- **Creator email outreach**
- **Community engagement**

Close Probability:

Segment	Probability
Telegram admins	65–75%
Micro creators	55–65%
Active trader groups	60–70%

Priority Level: High

Reason: Fastest entry point with compounding influence

1.6 Layer 4: Institutional Trust & Scale Layer (Long-Term)

This layer provides scale and credibility but has lower short-term accessibility.

Entities:

Influencers:

- **Ankur Warikoo**
- **Rachana Ranade**
- **Pranjal Kamra**

Platforms:

- **Paytm**
- **PhonePe**
- **Razorpay**

Banks:

- **HDFC**
- **ICICI**

- SBI
-

User Behaviour:

Trust-based adoption rather than intent-based usage

Execution Strategy:

- Defer initial outreach.
 - Approach after proof of usage and traction
 - Position as a retention and engagement enhancer
-

Close Probability:

Segment	Probability
Large influencers	20–30%
Fintech platforms	20–25%
Banks	10–20%

Priority Level: Low (Initial Phase)

Reason: Long sales cycle, high dependency on proof

1.7 Layer 5: Regret Creation Zones (Behavioural Trigger Layer)

This layer is not defined by entities but by user psychology.

Where Regret Occurs:

- High-value purchases
 - Incorrect investments
 - Poor loan decisions
 - Mistimed trades
-

Execution Strategy:

- Introduce “decision confidence” indicators.
 - Display regret probability.
 - Offer alternative recommendations.
-

Strategic Role:

This layer strengthens positioning and messaging across all other layers.

1.8 Prioritized Target List (Execution Order)

The following targets are prioritized based on:

- Ease of access
 - Decision proximity
 - Expected conversion.
-

Segment	Target Type	Priority	Close Probability
Telegram trading groups	Community	1	70%
Reddit finance communities	Community	2	65%
TradingView contributors	Community	3	60%
Micro finance creators	Influencer	4	60%

CA networks	Professional	5	55%
Smallcase managers	Wealth	6	50%
INDmoney	Fintech	7	40%
Upstox	Broker	8	35%
ET Money	Platform	9	30%
Razorpay	Fintech	10	25%

1.9 Access Strategy (Operational Layer)

Influencers:

- Primary: Agency-led introductions
 - Secondary: Direct outreach via business email
-

Communities:

- Direct contact with administrators
 - Active participation before pitching
-

Fintech / Platforms:

- LinkedIn outreach to partnerships teams
 - Founder-level introductions where needed.
-

1.11 High-Risk Decision Environments (Speculative & Gambling Behaviour Layer)

Context

A sizeable part of financial decision behaviour in India and globally is driven by high-risk, high-frequency speculative actions, including:

- Betting platforms
- Fantasy sports
- Crypto trading
- Options/intraday trading

These environments are characterized by:

- Rapid decision cycles
 - Emotional decision-making
 - High regret probability
 - Low structured validation
-

Stakeholder Categories

A. Fantasy & Skill-Based Platforms

- Dream11
 - MPL (Mobile Premier League)
 - My11Circle
-

B. Real-Money Gaming / Betting Ecosystem (Where legally applicable)

- Online poker platforms
 - Rummy platforms
 - Offshore betting ecosystems (user-driven, not institutional GTM targets)
-

C. Speculative Financial Behaviour (More Relevant for Finomo)

- Options trading communities
 - Intraday trading groups
 - Crypto trading platforms
-

User Behaviour Characteristics

- **Decision frequency:** Extremely high (multiple times/day)
 - **Validation:** Minimal or peer-driven
 - **Emotional state:** Impulsive / reactive
 - **Outcome:** High regret probability
-

Strategic Relevance to Finomo

This segment is not a primary institutional partnership target.

It is a behavioural capture opportunity.

Execution Strategy

1. Decision Interruption Layer

Insert Fnomo at the moment of action:

- **“Trade risk score”** before placing order.
 - **“Probability band”** for speculative trades
 - **“Loss exposure warning”**
-

2. Community-Level Entry

Focus on:

- **Telegram groups**
- **Discord communities**
- **Trading forums**

Approach:

- **Provide tools, not advice.**
 - **Allow users to confirm trades using Finomo.**
-

3. Positioning in This Segment

Do NOT position as:

- Advisor
- Risk eliminator

Position as:

“Decision clarity before high-risk actions”

Close Probability

Segment	Probability
Trading communities	65–75%
Telegram groups	70%
Speculative creators	55–65%

Gaming platforms (formal partnerships) <20%

Priority Level

**Medium–High (for user acquisition)
Low (for institutional partnerships)**

Risk Consideration

- Regulatory sensitivity
 - Brand positioning alignment
 - Avoid direct association with illegal betting ecosystems.
-

Strategic Value

This layer strengthens Fnomo’s positioning as:

A system that runs where decisions are fastest and most error prone.

1.12 Conclusion

The stakeholder ecosystem has been systematically restructured from a broad, descriptive listing into a prioritized, behaviour-driven, and execution-ready framework.

This transformation introduces the following critical enhancements:

- **Prioritization based on decision proximity**
Stakeholders are now ranked according to their direct influence on user decision-making moments, enabling focused and efficient execution.
- **Defined entry points across all stakeholder categories**
Each stakeholder group now includes clearly mapped integration or engagement points, ensuring practical applicability rather than theoretical alignment.
- **Realistic close probability assessment**
Partnership feasibility has been quantified, allowing for better resource allocation and expectation setting during outreach.
- **Structured access and engagement pathways**
Clear methods for approaching and activating each stakeholder segment have been set up, reducing ambiguity in execution.

Collectively, this framework ensures that the Go-to-Market strategy is operationally grounded, measurable in performance, and tightly aligned with real-world user behaviour patterns, enabling Finomo to execute with precision and scalability.

METRICS SYSTEM, ICP, POSITIONING, COMPETITIVE FRAMEWORK & REVENUE LOGIC

2. Product Capability Alignment

The GTM strategy is built with a clear distinction between current capabilities and future expansion.

Finomo does not assume advanced decision outputs at launch. Instead, it introduces them progressively based on user behaviour, data feedback, and engagement patterns.

Initial capabilities will focus on:

- **Structured comparison**
- **Simplified insights**
- **Guided evaluation**

Future layers will introduce:

- Decision scoring frameworks
- Risk indicators
- Behavioural validation signals

This phased approach ensures realistic execution while enabling long-term differentiation.

2.1 Objective

The purpose of this section is to set up a quantified performance system that translates the stakeholder ecosystem (Part 1) into:

- Measurable growth levers
- Defined success benchmarks
- Scalable revenue logic
- Clear ownership across functions

This ensures that execution is not activity-driven, but outcome-driven.

2.2 NORTH STAR METRIC

Pre-Action Usage Rate

Definition:

Percentage of users who use Finomo before executing a financial decision

Why this matters:

- Directly reflects behaviour capture.
 - Aligns with Fnomo's core positioning.
 - More meaningful than installs or traffic.
-

Targets:

Stage	Target
-------	--------

Month 1	20%
Month 2	30%
Month 3	40%+

2.3 CORE FUNNEL METRICS (CORRECTED & REALISTIC)

These benchmarks are aligned to high-intent, decision-stage users, not generic SaaS funnels.

Funnel Stage	Benchmark Range	Target
Impression → Click	2–4%	3%
Click → Signup	12–20%	15%
Signup → First Use	25–40%	30%
First Use → Repeat	30–50%	40%

Key Interpretation:

- Lower top funnel (expected due to niche intent)
- Higher mid-funnel conversion (due to decision relevance)

2.4 CHANNEL-LEVEL CAC (ALIGNED TO PART 1)

Channel	CAC Range (₹) Quality	Strategic Role
---------	-----------------------	----------------

Intent Search (Google)	150–300	Very High	Primary engine
Communities (Reddit/Telegram)	80–200	Very High	Early traction
Influencers (mid-tier)	300–700	Medium–High	Scale layer
Events	500–1200	Medium	Relationship building
Paid Social	1000–2000	Low	Avoid initially

Execution Rule:

- CAC > ₹500 → deprioritize.
 - CAC < ₹300 → scale
-

2.5 TRUTH TABLE (PERFORMANCE SCENARIOS)

Scenario	Users (90 Days)	CAC	Outcome
Worst Case	1K–2K	₹800–1000	Channel misfit
Realistic	5K–8K	₹300–500	Stable growth
Best Case	15K+	₹150–250	Scale-ready

Usage:

- Sets expectation for leadership.
- Anchors performance reviews

- Prevents over-optimism.
-

2.6 ICP (IDEAL CUSTOMER PROFILE)

Primary ICP

- Age: 25–40
 - Location: Urban / Tier 1–2
 - Income: ₹5L–₹30L annually
 - Behaviour:
 - Makes 5–15 financial decisions/month.
 - Consumes finance content.
 - Still seeks validation before action.
-

Psychological Traits

- Fear of making wrong decisions
 - Over-analysis
 - Seeks confirmation.
 - High regret sensitivity
-

Where They Exist (From Part 1)

- Google search (intent stage)
 - Broker platforms
 - Reddit / Telegram
 - YouTube finance content
-

2.7 POSITIONING FRAMEWORK

Core Positioning Statement

“Fnomo is the layer where users compare and validate before they decide”.

Functional Positioning

- Not execution
- Not education
- Not advisory

Fnomo operates as a decision intelligence layer

Behavioural Positioning

“Compare and validate before you decide”.

Dynamic Proof System

Positioning evolves based on real data:

Metrics to Capture:

- % of users who changed decisions
 - % of users who avoided losses
 - % Repeat usage
-

Example Output:

“38% of users changed their investment decision after using Fnomo”.

Usage:

- Marketing campaigns
 - Sales pitches
 - Influencer scripts
-

2.8 Competitive Framework

Market Landscape Positioning

Player	Core Strength	Key Limitation	Fnomo Positioning
Zerodha	Execution platform	No decision support layer	Pre-decision validation layer
Groww	Simplified UX	Limited depth in decision-making	Decision intelligence layer
Paytm	Large distribution	Lacks structured financial clarity	Insight and validation layer
ET Money	Financial education	No real-time decision support	Decision + timing layer

Structural Market Gap

The current ecosystem is built around three primary functions:

- Execution (Zerodha, Groww)
- Distribution (Paytm, fintech apps)
- Education (ET Money, content platforms)

However, a critical gap exists between understanding and action:

Users lack a structured system to validate decisions at the moment of execution.

Fnomo's Strategic Position

Fnomo operates in this gap.

Instead of competing within existing categories, it is positioned as:

A layer that enables users to compare, evaluate, and validate decisions before action.

Timing-Based Differentiation

Stage in User Journey	Existing Players	Fnomo
Discovery	Content / Aggregators	Present
Comparison	Platforms / Listings	Present
Decision Validation	Weak / Missing	Core Focus
Execution	Brokers / Apps	Not Competing

Key Strategic Insight

All major competitors operate after the user has formed a decision.

Fnomo is designed to operate before the decision is finalized, where:

- Uncertainty is highest
 - Influence is strongest
 - Conversion potential is maximized
-

Implication for GTM

This positioning enables:

- Non-competitive partnerships with existing platforms
 - Integration across multiple ecosystems
 - Lower resistance in stakeholder conversations
 - Stronger user adoption due to high contextual relevance
-

2.9 REVENUE LOGIC (ALIGNED TO 40% FLEXIBILITY)

Principle:

Revenue is not extracted — it is shared across ecosystem partners.

Revenue	Models by Segment
----------------	--------------------------

Segment	Model
----------------	--------------

Influencers	10–25%
--------------------	---------------

Communities	10–20%
--------------------	---------------

Fintech platforms	5–15%
--------------------------	--------------

Banks	3–6%
--------------	-------------

Strategic partnerships	up to 40%
-------------------------------	------------------

Strategic Use of 40% Cap

- **Reserved for:**
 - **Anchor partnerships**
 - **Closed ecosystems**
 - **High distribution unlocks.**
-

Rule:

Do not default to high revenue share
Use it selectively as an entry lever.

2.10 TEAM OWNERSHIP STRUCTURE

Product Marketing

- Positioning
 - Messaging
 - Proof generation
-

Sales / Business Development

- Stakeholder outreach
 - Partnership closures
 - Influencer onboarding
-

RevOps

- Funnel tracking
 - Metrics dashboard
 - Performance optimization
-

Founder / Strategy Lead

- Close strategic deals
 - Drive GTM direction.
 - Prioritize execution.
-

2.11 PERFORMANCE GOVERNANCE (DECISION RULES)

Kill Rules

- **CAC > ₹500 → stop channel.**
 - **Activation < 20% → fix onboarding**
 - **Retention drop >15% → fix product**
-

Scale Rules

- **WoW growth >10% → increase investment.**
- **CAC < ₹300 → double down**

2.12 Conclusion

This section sets up a fully quantified and execution-aligned performance framework, directly connected to the stakeholder architecture defined in Part 1.

Key outcomes include:

- A clear North Star metric aligned to behaviour.
- Realistic funnel benchmarks based on decision-stage users.
- Channel-level CAC clarity for resource allocation.
- A structured ICP grounded in actual user behaviour.
- Strong positioning anchored in pre-decision ownership
- Competitive clarity based on timing advantage
- Revenue logic aligned with partnership-first growth.
- Defined ownership across all execution functions

This ensures that Fnomo's Go-to-Market strategy is measurable, adaptable, and scalable, with clear decision rules guiding execution at every stage.

2A. PRODUCT DEFINITION, ICP PRIORITIZATION & EXECUTION LOGIC

2A.1 Initial Product Definition (V1)

At launch, Fnomo will not run as a full platform.

It will function as a decision utility layer built around three core use cases:

1. Investment Decision Engine

- Input: Stock / mutual fund / asset
 - Output:
 - Decision score (1–10)
 - Risk level
 - Alternative suggestion
-

2. Purchase Decision Engine

- Input: Product / price / EMI

- **Output:**
 - **Affordability score**
 - **Regret probability**
 - **Smarter alternative**
-

3. Trade Decision Engine

- **Input: Trade idea**
 - **Output:**
 - **Risk heat indicator.**
 - **Probability band**
 - **Exposure warning**
-

Product Rule

- **No dashboards**
 - **No complex analytics**
 - **No financial jargon**
-

Core Requirement

Decision clarity must be delivered in under 10 seconds.

2A.2 ICP Prioritization (Wedge Strategy)

While the broader ICP is defined in Part 2, execution requires a starting wedge.

Primary Wedge ICP

- **Active retail investors**
- **Platforms: Zerodha, Groww, TradingView**
- **Age: 25–35**
- **Behaviour:**
 - **Makes decisions weekly.**
 - **Consumes financial content.**
 - **Seeks validation before execution.**

Why This Segment First

- Already in decision environments (Part 1 alignment)
- High frequency of actions
- Faster feedback loop
- Lower CAC through communities

2A.3 Channel Priority Stack (Execution Order)

Avoid scattered execution, channels will be approached in a strict sequence:

Priority Order

1. Communities (Telegram, Reddit, TradingView)
2. Intent Search (Google, YouTube search)
3. Micro Influencers (50K–200K audience)
4. Fintech Platforms (INDmoney, Smallcase)
5. Institutions (Banks, large fintech)

Execution Principle

Start with high-access, high-intent environments before pursuing scale partnerships.

2A.4 Revenue Flow Model

To connect GTM to monetization:

User Journey

User → Decision Need → Uses Fnomo → Takes Action → Partner Conversion

Revenue Generation Points

- Affiliate / referral commissions.

- Partner-driven conversions
 - Revenue share from platforms
-

Example Flow

User checks investment → chooses partner platform → executes trade → Finomo earns share.

2A.5 Failure Scenario Framework

Execution must account for failure conditions.

Scenario 1: Low Activation (<20%)

- Cause: Weak onboarding or unclear value
 - Action: Simplify output, reduce friction
-

Scenario 2: High CAC (>₹500)

- Cause: Wrong channel choice
 - Action: Shift focus to communities
-

Scenario 3: Low Retention (<20%)

- Cause: Low perceived value
 - Action: Improve decision accuracy and feedback
-
-

2A.6 Feedback & Iteration Loop

A weekly execution loop will be implemented:

Step 1: Data Collection

- User behaviour
 - Drop-offs
 - Decision patterns
-

Step 2: Insight Extraction

- Where users hesitate
 - Which tools are used most?
-

Step 3: Product Iteration

- Improve outputs.
 - Simplify decision flow.
 - Add missing decision types.
-

Frequency

- Weekly iteration cycle
-
-

2A.7 Positioning Clarity (Avoid Misinterpretation)

Fnomo must be clearly distinguished from adjacent categories.

Fnomo is NOT:

- A content platform
 - A research tool
 - A financial advisor
-

Fnomo Is:

A system that provides decision clarity at the moment of action

2A.8 Compliance & Risk Positioning

Given the financial nature of the product:

Positioning Safeguard

- **No direct financial advice**
 - **No recommendation guarantees.**
 - **User keeps decision control.**
-

Communication Standard

- **“Decision support”**
 - **Not “investment advice”**
-
-

PART 2B: FIRST 14-DAY EXECUTION PLAN

Objective

Establish initial traction and confirm behaviour within the first 14 days.

Day 1–3: Setup

- **Create outreach pipeline.**
 - **Find 50 community targets.**
 - **Prepare decision tool demos.**
-

Day 4–10: Entry

- **Begin outreach (20/day)**
- **Enter Telegram and Reddit communities.**
- **Start posting decision insights.**

Day 10–14: Activation

- Secure first 3–5 integrations
 - Capture first active users.
 - Measure:
 - Activation
 - Pre-action usage
-

Expected Outcome

- 20–50 active users
- Initial feedback loop set up.
- First validation signal

3.EXECUTION ROADMAP (30–60–90 DAY PLAN)

Execution Ownership

3.1 Objective

The purpose of this section is to convert:

- Stakeholder architecture (Part 1)
- Metrics and performance framework (Part 2)

into a **time-bound, execution-ready roadmap** with:

- Clear priorities
 - Measurable outcomes
 - Defined actions
 - Personal ownership
-

3.2 Execution Philosophy

The execution approach is based on three principles:

1. **Start where decisions already happen.**
 2. **Validate behaviour before scaling distribution.**
 3. **Close fast-moving stakeholders first, delay heavy partnerships.**
-

3.3 PHASE 1: DAY 0–30 (FOUNDATION & SIGNAL CAPTURE)

Objective

Validate that users will use Finomo **before making decisions.**

3.3.1 My Role in This Phase (Direct Execution)

As Kush, I will:

- Personally initiate outreach across communities and creators
 - Directly engage with early users
 - Drive initial partnerships without dependency on team buildout.
-

3.3.2 Key Actions

A. Stakeholder Activation (Layer 2 & 3 First)

Focus:

- Telegram trading groups.
 - Reddit finance communities
 - Micro finance creators
-

Execution Plan

- 20 outreach messages per day
 - 100+ outreach per week
 - Target: 50+ conversations in 30 days
-

Expected Output

- 5–10 community integrations
 - 3–5 micro influencer collaborations
-

B. Product-Behaviour Validation

- Launch 3 decision tools:
 - Investment decision
 - Purchase decision
 - Trade decision
-

Goal

- 50–100 daily users
 - Measure:
 - First usage
 - Repeat usage.
 - Pre-action behaviour
-

C. Content & Insight Injection

- Publish decision insights in:
 - Reddit threads
 - Telegram groups
 - Trading discussions
-

3.3.3 Metrics Target

Metric	Target
Daily users	50–100
Activation rate	25–30%
Pre-action usage	15–20%

CAC

₹150–300

3.3.4 Success Criteria

- Users actively using Finomo before decisions.
 - Communities accepting decision insights.
 - Early repeat usage signals
-
-

3.4 PHASE 2: DAY 30–60 (VALIDATION & INITIAL DISTRIBUTION)

Objective

Prove that Fnomo can scale within **decision ecosystems**.

3.4.1 My Role in This Phase

- Transition from outreach → structured partnerships
 - Start engaging fintech and professional networks.
 - Build repeatable acquisition loops.
-

3.4.2 Key Actions

A. Scale Community Layer

- Expand from 5 → 15 communities.
 - Find top-performing channels.
 - Double down on high-retention sources
-

B. Influencer Integration (Selective)

- Close 5–10 mid-tier creators
- Integrate Finomo into their content.

Execution Approach

Not promotion.

👉 Use-case based integration:

- “Before I invested, I checked this”.

C. Professional Network Entry

- Begin outreach to:
 - CA networks
 - Financial advisors
 - Smallcase managers

D. First Fintech Conversations

Target:

- INDmoney
- Smallcase
- Upstox

3.4.3 Metrics Target

Metric	Target
Users	3,000–5,000
Activation	25–30%
Retention (Day 30)	20–25%
Partnerships	1–2 active

3.4.4 Success Criteria

- Consistent user growth
 - Repeat usage across segments.
 - First validated partnership
-
-

3.5 PHASE 3: DAY 60–90 (TRACTION & REVENUE ENTRY)

Objective

Establish Fnomo as a **decision layer within ecosystems**.

3.5.1 My Role in This Phase

- Close first revenue-linked partnerships
 - Optimize high-performing channels.
 - Strengthen positioning with data.
-

3.5.2 Key Actions

A. Partnership Closures

Close:

- 2–3 distribution partnerships
 - 1 fintech collaboration
-

B. Revenue Activation

- Introduce revenue sharing models.
 - Begin monetizing decision-driven conversions.
-

C. Positioning Upgrade (Data-Driven)

Use insights:

- % users changing decisions
 - % avoiding losses
-

Convert into:

- Sales narrative
 - Marketing proof
 - Partnership pitch
-

D. Expand High-Intent Channels

- Increase spends on:
 - Google intent traffic
 - High-performing communities
-

3.5.3 Metrics Target

Metric	Target
Users	10K–15K
Retention	30–35%
Pre-action usage	35–40%
Revenue partnerships	2–3

3.5.4 Success Criteria

- Clear behavioural adoption
- Revenue-linked partnerships

- Channel-level scalability.
-
-

3.6 EXECUTION ALIGNMENT (PART 1 + PART 2)

From Part 1:

- Focus on decision and validation layers first.

From Part 2:

- Optimized for:
 - Pre-action usage
 - CAC efficiency
 - Retention
-

Result:

Execution is:

- Focused
 - Measurable
 - Scalable
-
-

3.7 KEY EXECUTION PRINCIPLE

Do not chase scale before behaviour is confirmed.

3.8 FINAL EXECUTION POSITIONING

As Kush, my role is not to:

- Build strategy decks.
- Suggest ideas.

My role is to:

- Enter decision ecosystems.
 - Close early stakeholders
 - Validate behaviour.
 - Build distribution loops.
-

3.9 Conclusion

This execution roadmap ensures that Fnomo's GTM is:

- Grounded in real user behaviour
- Focused on high impact stakeholders
- Measurable through defined metrics
- Driven by direct execution ownership.

Most importantly, it sets up a clear transition:

From planning → to execution → to revenue

TEAM EXECUTION MODEL (SOLO MODE OPERATING SYSTEM)

Execution Ownership

4.1 Objective

To define a **realistic execution model** for Fnomo's GTM in its current stage:

- Early-stage company
- Team under formation
- No fully built departments yet

This section sets up how GTM execution will be driven **independently and efficiently** until scale requires specialization.

4.2 Ground Reality

At this stage:

- There is **no dedicated GTM team**.
 - No structured sales engine
 - No mature marketing function
-

Execution Principle

Execution must not wait for team formation

It must begin at once with a **single owner-led system**.

4.3 Role Consolidation Model

In the first phase, I will operate across four critical roles:

1. Strategy & Founder Mode

Responsibilities:

- Define GTM direction.
 - Prioritize stakeholders (from Part 1)
 - Decide where to invest time and effort.
-

2. Business Development / Sales Mode

Responsibilities:

- Daily stakeholder outreach
 - Partnership conversations
 - Closing early collaborations
-

3. Product Feedback Loop

Responsibilities:

- Capture user behaviour insights.

- Identify friction points in decision flow.
 - Continuously refine decision tools
-

4. RevOps & Metrics Tracking

Responsibilities:

- Track funnel metrics (from Part 2)
 - Monitor CAC, activation, retention.
 - Apply kill/scale rules.
-

4.4 Daily Operating System (Execution Discipline)

Daily Time Allocation

Function	Time Allocation
Outreach & Partnerships	2–3 hours
Follow-ups & Calls	2 hours
Product Feedback & Testing	2 hours
Metrics Review & Optimization	1 hour

Daily Output Targets

- 20 new outreach messages
 - 5–10 follow-ups
 - 2–3 live conversations
 - 1 actionable product insight
-
-

4.5 Weekly Execution Structure

Weekly Targets

Metric	Target
Outreach	100+
Conversations	25–40
Partnerships initiated	5–8
Deals closed	1–2

4.6 Tool Stack (Minimum Required)

Outreach & Tracking

- Google Sheets (pipeline tracking)
 - LinkedIn (stakeholder access)
 - Email (primary outreach)
-

Community Engagement

- Telegram
 - Reddit
 - Discord
-

Metrics Tracking

- Basic dashboard (Google Sheets / Notion)
- Funnel tracking (manual if needed)

Execution Principle

Tools should not slow execution
Speed matters more than perfection

4.7 Decision-Making System

Kill Rules (From Part 2)

- CAC > ₹500 → stop channel.
 - Activation < 20% → fix onboarding
 - Low engagement → drop stakeholder
-

Scale Rules

- CAC < ₹300 → increase effort
 - High repeat usage → expand channel.
 - Strong community response → double down
-
-

4.8 Transition to Team Structure

When to Expand Team

Only after:

- Consistent user growth
 - Repeatable acquisition channels
 - Proven partnership model
-

First Hires (Priority Order)

1. Content + distribution operator
2. BD support for outreach scaling

3. Product support for tool refinement

Execution Principle

Team follows traction, not the other way around.

4.9 Personal Execution Commitment

As Kush Trivedi, I will:

- Not wait for ideal conditions
- Not rely on external dependencies
- Not over-structure early execution

Instead:

- Enter stakeholder ecosystems directly.
 - Drive early traction personally.
 - Build systems only after validation.
-
-

4.10 Strategic Advantage of Solo Execution

Speed

Decisions and execution happen instantly.

Learning Loop

Direct feedback from users and stakeholders

Control

No dependency on multiple teams

4.11 Conclusion

This solo execution model ensures that Fnomo's GTM:

- Starts immediately without operational delays.
- Remains aligned with real user behaviour
- Is continuously optimized based on direct feedback.
- Builds strong foundational traction before scaling.

It sets up a clear reality:

Early GTM success is not team-dependent
It is execution-dependent.

PART 5: DIFFERENTIATION, OUTREACH EXECUTION, PARTNER PITCH & DEAL CLOSURE FRAMEWORK

strategy → execution credibility → deal-closing capability.

Execution Ownership

5.1 Objective

Define:

- What makes this GTM fundamentally different?
- How stakeholders will be approached
- How conversations will be converted into partnerships
- Which targets will be pursued first with realistic close probability?

This section ensures that the GTM is not only designed but **capable of immediate execution and closure.**

5.2 CORE DIFFERENTIATION FRAMEWORK

1. Ownership of Timing, Not Product

Most platforms operate:

- After decision (execution, tracking, reporting)

Fnomo operates:

- Before decision

Strategic Impact:

- No direct competition
 - Sits above all platforms.
 - Integrates rather than replaces.
-

2. Behaviour Interception, Not Traffic Acquisition

Traditional GTM:

- Focus on traffic, installs, impressions.

This approach:

- Focus on **decision behaviour interception**.

Execution Impact:

- Higher intent users
 - Better activation
 - Lower CAC
-

3. Regret as a Strategic Lever

Most products ignore regret.

Finomo:

- Identifies it.
- Quantifies it.
- Uses it to trigger action.

Execution Impact:

- Strong emotional engagement
 - Higher repeat usage
-

4. Non-Competitive Positioning

Fnomo does not compete with:

- Brokers
- Fintech platforms
- Banks

It integrates with them.

Execution Impact:

- Easier partnerships
 - Lower resistance
 - Faster entry
-

5. Habit Loop Creation

User journey becomes:

Decision → Check Fnomo → Act → Repeat

Execution Impact:

- Retention-driven growth
 - Organic adoption
 - Behavioural lock-in
-

5.3 OUTREACH EXECUTION FRAMEWORK

5.3.1 Outreach Philosophy

Outreach is not sales-led.

It is:

Context-driven, value-first, and behaviour-aligned

5.3.2 Primary Outreach Channels

Stakeholder	Channel
Communities	Telegram / Reddit DM
Influencers	Email / LinkedIn
Fintech	LinkedIn / warm intro
Professionals	Direct network / referrals

5.3.3 Core Outreach Script (Base Version)

“You already influence how people make financial decisions.
What we are building improves the quality of those decisions before users act.
I would like to explore how we can integrate this into your ecosystem in a way that adds value to your users.”

5.3.4 Community-Specific Script

“Your group is actively discussing trades and investments daily.
We have built a decision layer that helps users validate their actions before executing.
Would you be open to testing this with your members?”

5.3.5 Influencer Script

“Your content already drives decision-making for your audience.
We are building a tool that helps users validate decisions before acting.
This can be integrated into your content without changing your format.”

5.3.6 Fintech / Platform Script

“We are not trying to replace your platform.

We help improve user decision confidence before action, which directly impacts engagement and retention.

I would like to explore a lightweight integration.”

5.4 PARTNER PITCH STRUCTURE

Opening Position

“Fnomo sits before the transaction, not after it.”

Core Value Proposition

- Improves decision confidence.
 - Reduces hesitation.
 - Increases action clarity.
-

Partner Benefit

Stakeholder	Benefit
Influencers	Higher engagement
Communities	More meaningful discussions
Fintech	Improved retention
Brokers	Better user activity

Commercial Alignment

“We operate on a revenue-share basis, ensuring zero upfront risk and aligned incentives.”

5.5 OBJECTION HANDLING FRAMEWORK

Objection 1: “Why is this needed?”

Response:

Users already hesitate before making decisions.
Fnomo captures and resolves that hesitation.

Objection 2: “Will users actually use it?”

Response:

We integrate at the exact moment of decision, not after.
This ensures relevance and higher adoption.

Objection 3: “How is this different from existing tools?”

Response:

Existing tools provide information.
Fnomo provides decision clarity at the moment of action.

Objection 4: “What is the revenue model?”

Response:

Revenue is shared based on outcomes, ensuring aligned incentives and no upfront cost.

Objection 5: “Is this scalable?”

Response:

The model is designed to integrate across platforms, communities, and users, making it inherently scalable once confirmed.

5.6 FIRST 20 TARGETS (EXECUTION PRIORITY LIST)

Selection Criteria

- High decision proximity
 - Ease of access
 - Faster closing cycle
-

Target	Category	Priority	Close Probability
Telegram trading admins (Top groups)	Community	1	70%
Reddit India Investments mods	Community	2	65%
TradingView contributors	Community	3	60%
Micro finance YouTubers	Influencer	4	60%
CA networks (local firms)	Professional	5	55%
Smallcase managers	Wealth	6	50%
Active Discord trading groups	Community	7	60%
INDmoney	Fintech	8	40%
Upstox	Broker	9	35%
ET Money	Platform	10	30%

Razorpay	Fintech	11	25%
Groww (mid-level partnerships team)	Broker	12	25%
Local financial advisors	Professional	13	50%
Mid-tier influencers (50K–200K)	Influencer	14	55%
Options trading communities	Community	15	65%
Crypto trading groups	Community	16	60%
LinkedIn finance creators	Influencer	17	50%
Personal finance bloggers	Influencer	18	50%
Early fintech startups	Platform	19	45%
Niche investment forums	Community	20	60%

5.7 DEAL EXECUTION FLOW

Step 1: Outreach

- Initiate contact
 - Context-based introduction
-

Step 2: Conversation

- Understand their audience.
- Align value.

Step 3: Pilot

- Offer lightweight integration.
- No upfront commitment

Step 4: Validation

- Measure usage
- Track engagement

Step 5: Scale

- Introduce revenue sharing.
- Expand integration.

5.8 FINAL POSITIONING STATEMENT

“This GTM strategy is not designed to acquire users through traditional channels. It is designed to capture decision behaviour at the point of action.”

5.9 FINAL CLOSING STATEMENT

“The objective is not to compete with existing platforms, but to become the layer that sits before them — influencing every financial decision before it is made.”
